

Weather App + Movie Search App (API)

Project Overview

In this minor project, students are required to develop two interactive web applications: a **Weather App** and a **Movie Search App**. The applications should fetch and display real-time data using public APIs. Students are expected to implement asynchronous JavaScript concepts, API integration, and dynamic DOM manipulation to create responsive and user-friendly interfaces.

Learning Objectives

Upon completion of this project, students should be able to:

- Apply JavaScript ES6+ concepts in real-world applications.
- Manipulate the DOM dynamically.
- Work with asynchronous programming techniques.
- Integrate and consume REST APIs.
- Build responsive and interactive web applications.

Technology Stack

- HTML5
- CSS3
- JavaScript (ES6+)
- Public APIs
- Git & GitHub

Project Requirements

Weather App

Students must implement:

- Search weather information by city name.
- Display current temperature and weather conditions.
- Show additional details such as humidity and wind speed.
- Handle API errors gracefully.

- Responsive user interface.

Movie Search App

Students must implement:

- Search movies using a public movie database API.
- Display movie posters and details.
- Show movie ratings and release information.
- Handle invalid search queries.
- Responsive user interface.

Focused Areas

JavaScript Core (ES6+)

Students should demonstrate:

- Arrow functions
- Template literals
- Destructuring
- Modules
- Modern JavaScript syntax

DOM Manipulation

Students should implement:

- Dynamic content updates
- Event handling
- Form processing
- UI rendering based on API responses

Asynchronous Programming

Students should demonstrate:

- Promises
- Async/Await
- Fetch API
- Error handling

APIs

Students should implement:

- API integration
- JSON data handling
- Data fetching and rendering
- Managing API responses and errors

Submission Format

- Students must submit their project before the deadline: **20/06/2026**.
- Submission can be done using:
 - GitHub Repository Link
 - Google Colab Link (if applicable)
- Ensure that the submitted repository contains proper documentation and source code.

Submission Procedure

1. Login to your account.
 2. Go to **My Course**.
 3. Click on **Main Program**.
 4. Select **Modules**.
 5. Click on the **Minor Project** module.
 6. Select **Minor Project 03** and review the project requirements.
 7. Open the **Minor Project Submission Link** folder.
 8. Submit the GitHub/Google Colab link in the provided Google Form before the deadline.
- Late submissions may not be accepted without prior approval.
